

Laporan Instalasi Docker — Cloud Computing

Nama : Rafhan Mazaya Fathurrahman

NIM : 101012300238

Kelas : BS1TT-47-REG-GAB01

Dosen : Cahyo Alhazim

Repo : <https://github.com/fhanyuh/cloud-computing-docker-101012300238>

1. Versi Docker Terpasang

```
docker --version
```

```
docker compose version
```

Komponen	Versi
Docker Engine	29.7.2 (Community)
Docker Compose	v5.5.0
Container Runtime	containerd v2.3.3 / runc 1.4.3

```
Docker version 29.7.2, build a7dcaa6
Docker Compose version v5.5.0
Server Version: 29.7.2 | Containers: 10 | Images: 22
```

2. Verifikasi Docker Berjalan (hello-world)

```
docker run --rm hello-world
```

```
Hello from Docker!
```

```
This message shows that your installation appears to be working correctly.
```

```
To generate this message, Docker took the following steps:
```

```
1. The Docker client contacted the Docker daemon.
```

```
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
```

```
(amd64)
```

```
3. The Docker daemon created a new container from that image which runs the  
executable that produces the output you are currently reading.
```

```
4. The Docker daemon streamed that output to the Docker client, which sent it  
to your terminal.
```

```
To try something more ambitious, you can run an Ubuntu container with:
```

```
$ docker run -it ubuntu bash
```

```
Share images, automate workflows, and more with a free Docker ID:
```

```
https://hub.docker.com/
```

```
For more examples and ideas, visit:
```

```
https://docs.docker.com/get-started/
```

Hello from Docker!

This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:

1. The Docker client contacted the Docker daemon.
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
(amd64)
3. The Docker daemon created a new container from that image which runs the executable that produces the output you are currently reading.
4. The Docker daemon streamed that output to the Docker client, which sent it to your terminal.

To try something more ambitious, you can run an Ubuntu container with:

```
$ docker run -it ubuntu bash
```

Share images, automate workflows, and more with a free Docker ID:

<https://hub.docker.com/>
